complete the case

Buckeye Enclosures has become an industry leader by making it quick and easy for OEMs to source cases that are ready for installation. And while the idea of a “complete case” is something that competitors like to talk about, Buckeye Enclosures has specialized in this area of business for years. We’re not a fabrication shop...we just act like one when it comes to customizing our standard products. We’ll take any one of our cases and customize it to whatever spec you have in mind. Simply put, “Completing the Case” is what we do best. It’s the very heart of our business.

Today’s customer is often strapped for time and internal resources and may only place periodic orders throughout the year. We’ve succeeded in working with just that type of customer. You can rely on Buckeye Enclosures to handle all the details of getting your cases ready for production, and deliver your projects on time and per spec.

Starting with a broad selection of standard products in a range of configurations and sizes, Buckeye Enclosures assists customers with selection and design by providing engineering support and tools like AutoCAD and 3D modeling.

We have worked with Buckeye Shapeform for 15 years. They are very reliable and they are always providing suggestions on how to improve the products and reduce costs. In addition, the final product always meets our expectations.

Mike Riley
Innovative Electronic Design

Buckeye Shapeform has helped us with enclosures for many projects stemming back for 20 years. Their service and end product are second-to-none. We will continue to use them and we highly recommend their services to anyone.

Bill Fredette
Trek, Inc.

we provide a host of production services—including:

- **punching/holes**

With an extensive inventory of over 600 punches from the simplest to the most complex, including single D, double D, round, obround, vent, square, rectangular and trapezoid.

- **self-clinching inserts**

We provide studs, standoffs, blind studs, captive nuts, spring latches, rivets and right angle standoffs in a variety of sizes for mounting electronics.

machining

With dedicated CNC milling equipment, we can create virtually any shape you require. Most machining is better performed before metal is finished, assuring a uniform finish coating.

special sizes

We can alter the height, width and depth of enclosures to meet your specific needs.

- **finishing**

Products with metal parts are treated with both an undercoat and top coat of powder paint, water-based paints, or vinyl-clad aluminum that provide a durable and attractive finish.

- **shielding**

Many of our standard designs incorporate effective shielding by utilizing overlapping seams and multiple fasteners. For special requirements, we can provide copper-beryllium and metal-impregnated gasketing, copper-nickel paint, and the placement of additional fastening hardware.

masking

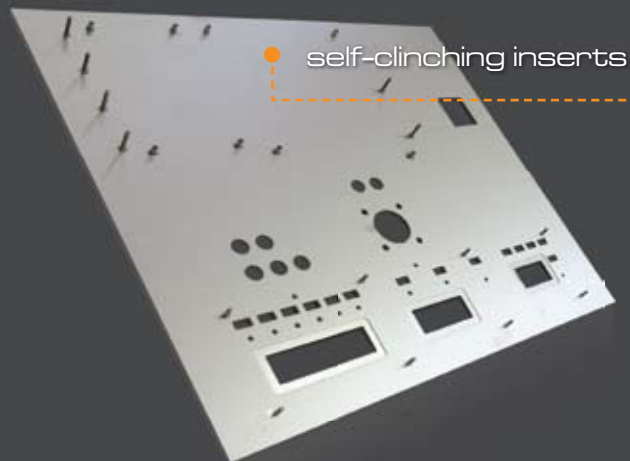

To help achieve a specific appearance or shielding requirement, we can meet your specific masking requirements.

- **screen printing**

Whether you require single or multi-color screening, our experienced team can provide this easy and cost-effective method of adding functionality and eye appeal to your case.

3D modeling

We provide an extensive library of drawing for the quick and easy layout of your components. Visit www.buckeyeshapeform.com for these drawings.

products that **perform** from a
company that **delivers**.

What sets Buckeye Shapeform apart from its competitors is the level of technical support, customization and value-added services that we provide in-house. Whether you're up against an impossible deadline, or you're simply stretched for resources, you'll find that Buckeye goes the extra mile in ways that our competitors simply can't...or won't. We welcome the small order, and we take pride in our production excellence and on-time delivery statistics, which are the envy of companies everywhere.
